ABSTRACT OF THE DISCLOSURE

Pharmaceutical compositions containing human glucocerebrosidase having exposed mannose residues are provided. Such compositions are suitable for the treatment of human patients having Gaucher's disease. The compositions are produced by treating a culture of mammalian cells capable of expressing human glucocerebrosidase with an inhibitor of carbohydrate processing that acts to inhibit the conversion of Glc₃Man₉GlcNac₂ to smaller species and recovering human glucocerebrosidase having exposed mannose residues from the culture.
